Professional recycling of stonewool substrates

Grodan Recycling Service UK

Professional recycling and reuse of stonewool substrates

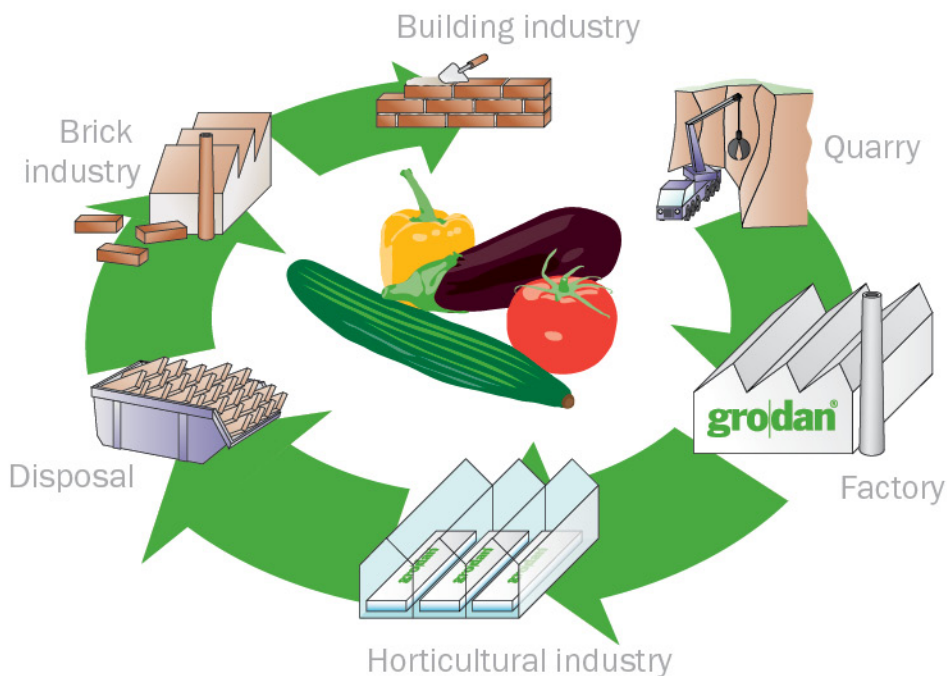

Sustainable recycling

Used substrate slabs, blocks and plugs are recycled by Grodan in a sustainable manner. The recycled material can be processed to create new stonewool products or used for the production of bricks and blocks or in other applications such as composting. For instance, 50m³ of stonewool is used to produce 8m³ of bricks. This saves on raw materials.

Grodan's ambition is to recycle all substrate after cultivation.

REMEMBER:

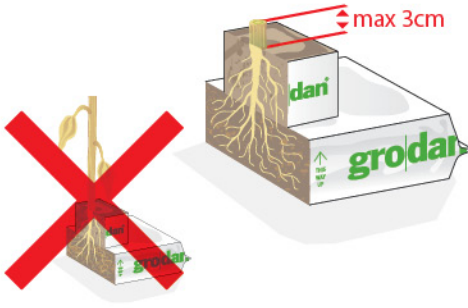

only Grodan slabs can be recycled at the quoted prices.

Recycling rules

Please follow the rules below when sending your substrate for recycling, otherwise you may be liable for extra costs.

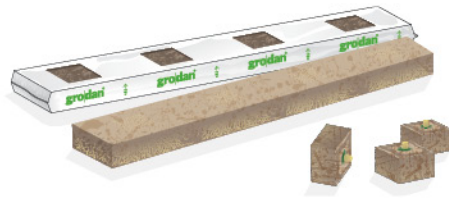

- Remove the crop to leave a maximum of 3cm of stem

- No contaminants such as string, clips, pots, plant waste, stones, gravel, concrete may be present in the material for recycling

- The slabs can be sent for recycling with the plastic wrapper still intact, however, if you intend to shred the slabs yourself the plastic should be removed first

- Fill the bins fully to make it cost-effective

Our partner in our recycling solution is Recycling Intelligence Ltd., based in the Lee Valley. In conjunction with Recycling Intelligence we can provide two options for the disposal of your Grodan slabs.

Recycling Intelligence 

Option 1 standard disposal

Slabs can be sent for recycling with the plastic wrapper of the slabs and blocks still intact. The cost per tonne does not include transport to one of the disposal sites. Recycling Intelligence Ltd. can arrange a competitive transport quote for you, or if you wish you can arrange the transport yourself. Their standard transport will be done using 40 yard roll-on, roll-off bins.

Option 2 shredded slab disposal

Slabs can be sent for recycling as a shredded product. You will have to remove the plastic wrappers from the blocks and slabs prior to shredding. This will have a reduced cost. Again Recycling Intelligence Ltd. can arrange a competitive transport quote for you. Please call them directly to ask about the available options and quotes, and to discuss our specification for 'shredded Grodan'.

Please contact Steve Burton at Recycling Intelligence directly for transport quotes or to enquire about Option 2 (shredded slab disposal): steve@recyclingintelligence.co.uk, T 07710 596283, F 0700 6076184

Recycling Depots and Transport

There will be several recycling depots available, depending on demand. The main depot will be in the Lee Valley area. The competitive transport prices and various modes of transport available should make it cost effective for your Grodan slabs to be transported to a depot from most horticultural areas of the UK. Using Option 2, (pre-shredding your slabs), will lower both the transport and the recycling costs.
